It is certified that error appears in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

Column 7

Claim 1 line 30 through column 8 line 11 should read as follow s:

1. A device for carrying a heated liquid, and controlling the temperature of the heated liquid, comprising:

a liquid conveying element including a passage for carrying the heated liquid,

first and second temperature sensing devices operatively associated with said liquid conveying element to enable sensing the temperature of the heated liquid in said passage,

a controller actively connected to said first temperature sensing device and actively connected to said second temperature sensing device such that said first and second temperature sensing devices sense the temperature of the heated liquid in said passage and communicate the sensed temperature readings to said controller, said first and second temperature sensing devices capable of being selectively deactivated upon failure or malfunction such that said controller only communicates with the remaining actively connected one of said first and second temperature sensing devices; and

a heater coupled with said controller and operated by said controller based on the sensed temperature readings taken by at least one of said first and second temperature sensing devices.
